Hire a tutor

 Oxford University - DPhil Psychiatry

Having worked as a tutor in various capacities over the years, I am passionate about working alongside students to help them maximize the potential that they have inside them already. My academic background is in Psychology and Neuroscience, but being someone with a thirst for knowledge, I have also studied modern languages, philosophy and statistics.

Vetted Tutor

Personally Interviewed

Our tutors go through a rigorous selection process, having been interviewed to assess their teaching skills and subject knowledge. **They have extensive tutoring experience with a track record of success**, helping students achieve their academic goals.

Tutoring Experience

Part of my work to date has brought my interests in health and well-being together with my interest in what makes us different by studying the psychology of religion. There is nothing more rewarding than finding an area of research about which one is passionate and learning more and more about it.

This passion is truly motivating and actually helps us to retain what we learn because we are telling our brains that this information is relevant to us. Rest assured that with my background in psychology, we will be able to use our knowledge of the brain and the mind to help you maximize your potential and ace those assessments.

Self Employed Tutor

- Tutor of Psychology, French, Mathematics, Statistics, Coding, and Oxbridge Applications (February 2014 - Present)

School of Psychology, University of Glasgow

- Supervisor of Peer Assisted Learning (December 2018 - March 2021)

Lingue Senza Frontiere, Milan, Italy

- English Teacher (June 2018 - August 2018)

College Mercier St Paul, Meulan, France

- English Teacher (January 2015 - April 2015)

Tutoring Approach

My approach to tutoring is collaborative and I like to work with students to really help them find a love for their discipline that will become the fuel for their desire to learn. Within psychology, I am particularly interested in studying the brain and how this organ gives rise to the complexity of the mind. I have spent a lot of time studying mental health conditions, as well as disorders of brain function, including dementia and stroke. In addition to this, I am also really interested in what makes us different, across dimensions, such as personality and intelligence.

Drawing on the psychology of learning and teaching, I make sure that my lessons are structured in a way that students are most likely to retain what we discuss and implement it in their courses. I am particularly interested in using memory strategies and techniques that are good for consolidation, including elaborative encoding, chunking, active recall, and memory palaces
